

Computer Networks Lab

UE19CS256

Week 2

Name: Sreenath Saikumar

Semester: 4 Section: G

SRN: PES2UG19CS406

Date: 04/02/2021

Objectives:

1. To understand persistent and non-persistent HTTP connections and corresponding performance impact.

Procedure:

1. Create a web page with N (eg. 10) embedded images. Each image should be of minimum 2MB size. Configure your browser (Firefox) with the following settings. (Each setting requires repeat of experiment)
 - a. Non-persistent Connection
 - b. 2 persistent Connections
 - c. 4 persistent Connections
 - d. 6 persistent Connections
 - e. 8 persistent Connections
 - f. 10 persistent Connections
2. Note the time taken to display the entire page in each setting and ensure **cache is cleared** before starting the web request.

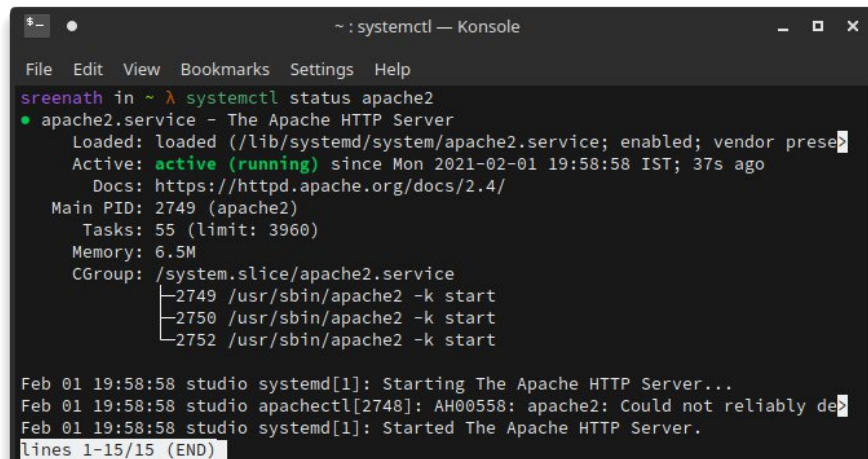

Step 1: Setting up the Apache Server

Ensure that the apache2 server package is installed by using the command:

```
sudo <package manager> install apache2
```

Now to check if the server is running, use the following command if using a machine with systemd:

```
sudo systemctl status apache2
```

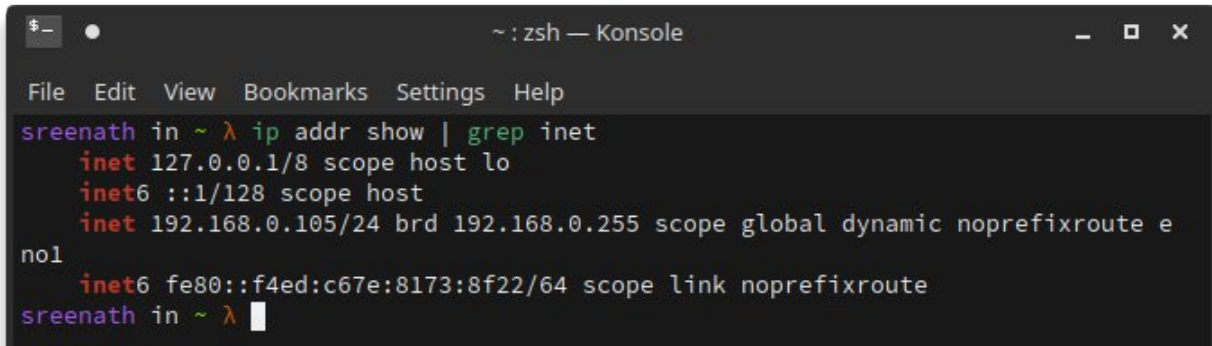

```
~ : systemctl — Konsole
File Edit View Bookmarks Settings Help
sreenath in ~ λ systemctl status apache2
● apache2.service - The Apache HTTP Server
   Loaded: loaded (/lib/systemd/system/apache2.service; enabled; vendor prese
   Active: active (running) since Mon 2021-02-01 19:58:58 IST; 37s ago
     Docs: https://httpd.apache.org/docs/2.4/
   Main PID: 2749 (apache2)
    Tasks: 55 (limit: 3960)
   Memory: 6.5M
    CGroup: /system.slice/apache2.service
            └─2749 /usr/sbin/apache2 -k start
              └─2750 /usr/sbin/apache2 -k start
                └─2752 /usr/sbin/apache2 -k start

Feb 01 19:58:58 studio systemd[1]: Starting The Apache HTTP Server...
Feb 01 19:58:58 studio apache2[2748]: AH00558: apache2: Could not reliably de
Feb 01 19:58:58 studio systemd[1]: Started The Apache HTTP Server.
lines 1-15/15 (END)
```

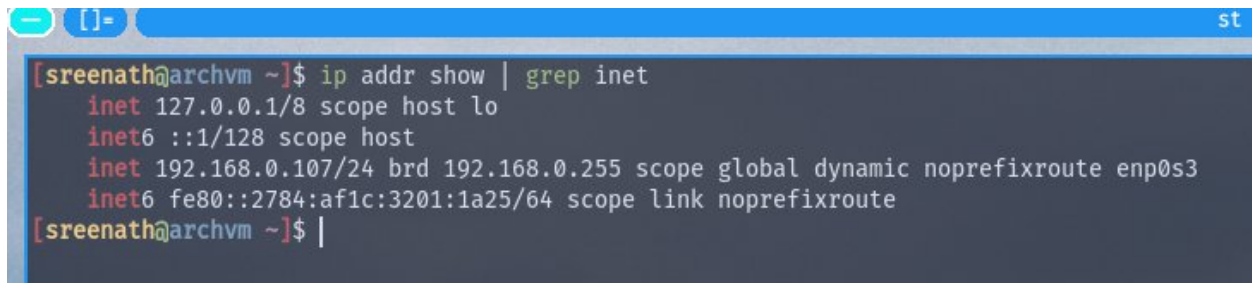

Step 2: Setting the IP addresses

Since both devices are connected to a router, we will be using the predefined IP's that have been allocated by the router on both the server and client side.

A terminal window titled '~: zsh — Konsole' showing the command 'ip addr show | grep inet' being executed. The output lists three network interfaces: 'lo' with IP 127.0.0.1, 'host' with IP ::1, and 'eno1' with IP 192.168.0.105. The user 'sreenath' is in the '~' directory.

```
$ ip addr show | grep inet
inet 127.0.0.1/8 scope host lo
inet6 ::1/128 scope host
inet 192.168.0.105/24 brd 192.168.0.255 scope global dynamic noprefixroute e
no1
inet6 fe80::f4ed:c67e:8173:8f22/64 scope link noprefixroute
sreenath in ~ λ
```

Server Side IP

A terminal window titled '[]= st' showing the command 'ip addr show | grep inet' being executed. The output lists three network interfaces: 'lo' with IP 127.0.0.1, 'host' with IP ::1, and 'enp0s3' with IP 192.168.0.107. The user 'sreenath' is in the '~' directory.

```
[sreenath@archvm ~]$ ip addr show | grep inet
inet 127.0.0.1/8 scope host lo
inet6 ::1/128 scope host
inet 192.168.0.107/24 brd 192.168.0.255 scope global dynamic noprefixroute enp0s3
inet6 fe80::2784:af1c:3201:1a25/64 scope link noprefixroute
[sreenath@archvm ~]$
```

Client Side IP

IP addresses used:

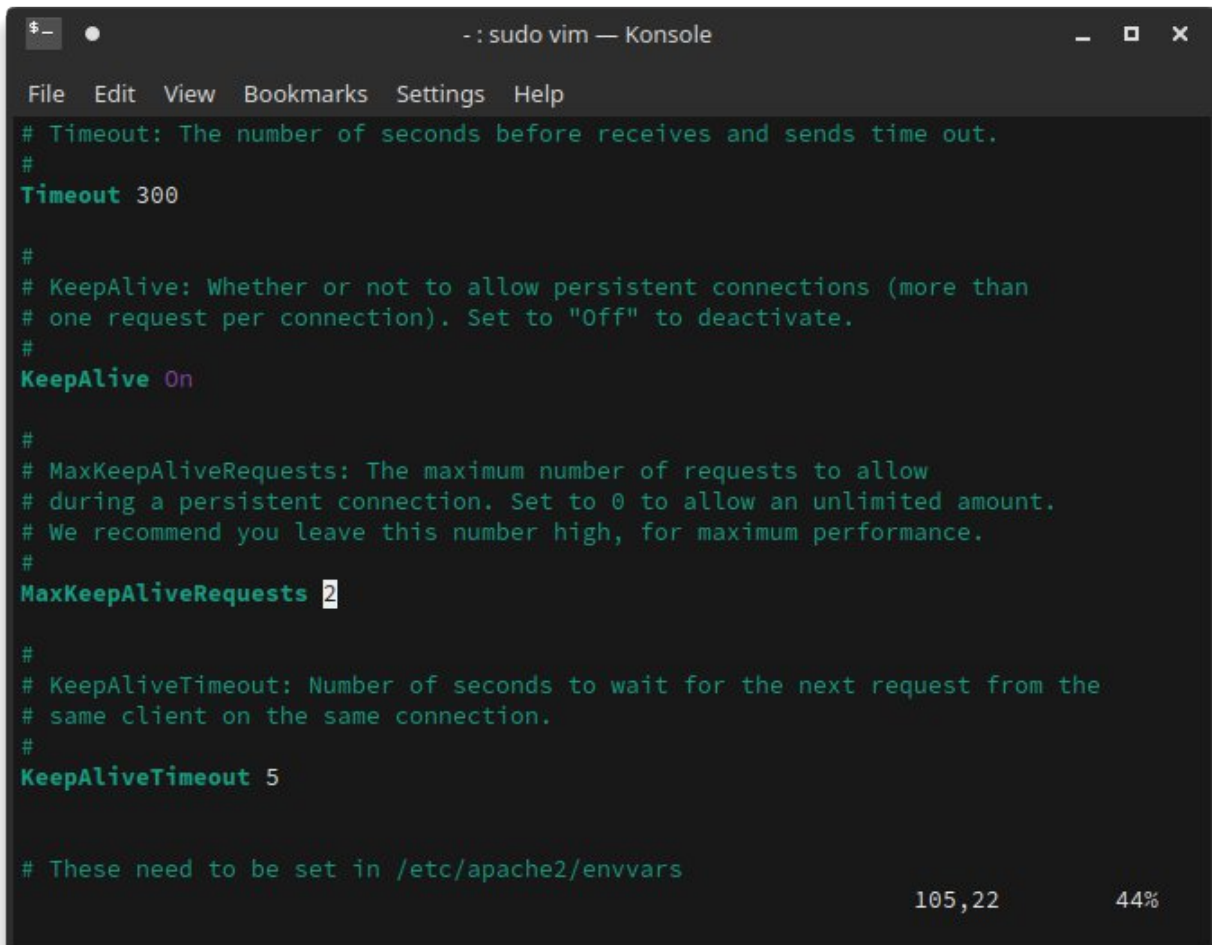

192.168.0.105 - Server

192.168.0.107 - Client

Step 3: Editing apache2.conf

In the `/etc/apache2/` directory, modify the `apache2.conf` file which is the configuration file for the apache2 server using any text editor, for example:

```
sudo vim /etc/apache2/apache2.conf
```

```
$ - : sudo vim — Konsole
File Edit View Bookmarks Settings Help
# Timeout: The number of seconds before receives and sends time out.
#
Timeout 300
#
# KeepAlive: Whether or not to allow persistent connections (more than
# one request per connection). Set to "Off" to deactivate.
#
KeepAlive On
#
# MaxKeepAliveRequests: The maximum number of requests to allow
# during a persistent connection. Set to 0 to allow an unlimited amount.
# We recommend you leave this number high, for maximum performance.
#
MaxKeepAliveRequests 2
#
# KeepAliveTimeout: Number of seconds to wait for the next request from the
# same client on the same connection.
#
KeepAliveTimeout 5

# These need to be set in /etc/apache2/envvars

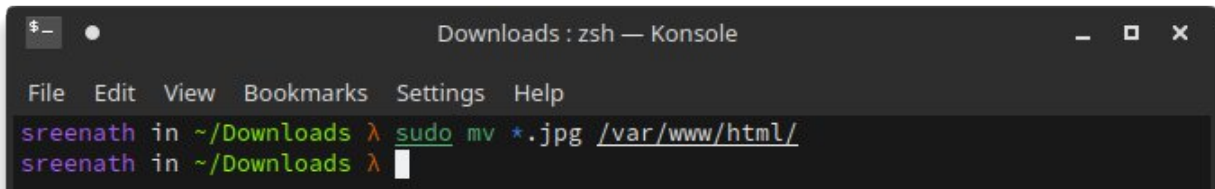

105,22 44%
```

Ensure that the `KeepAlive` value is set to `On` and that the `MaxKeepAliveRequests` value is set to `2`.

Step 4: Moving Images to the server path and creating a webpage

Assuming the provided images are in the Downloads folder of the server system, execute the following command:

```
sudo mv *.jpg /var/www/html/
```

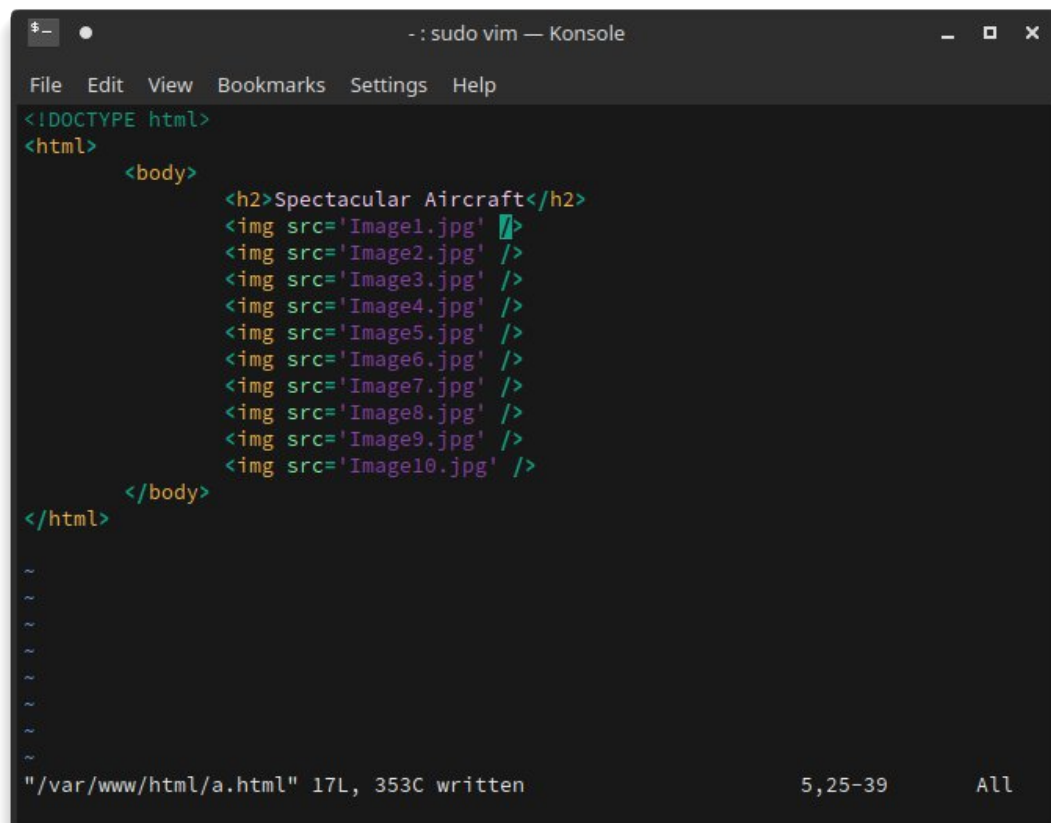

A terminal window titled "Downloads : zsh — Konsole" with a menu bar (File, Edit, View, Bookmarks, Settings, Help). The prompt is "sreenath in ~/Downloads". The command "sudo mv *.jpg /var/www/html/" has been entered and executed. The prompt is now "sreenath in ~/Downloads".

```
$ _ Downloads : zsh — Konsole
File Edit View Bookmarks Settings Help
sreenath in ~/Downloads λ sudo mv *.jpg /var/www/html/
sreenath in ~/Downloads λ
```

This will move any jpg file in the Downloads folder to the server path.

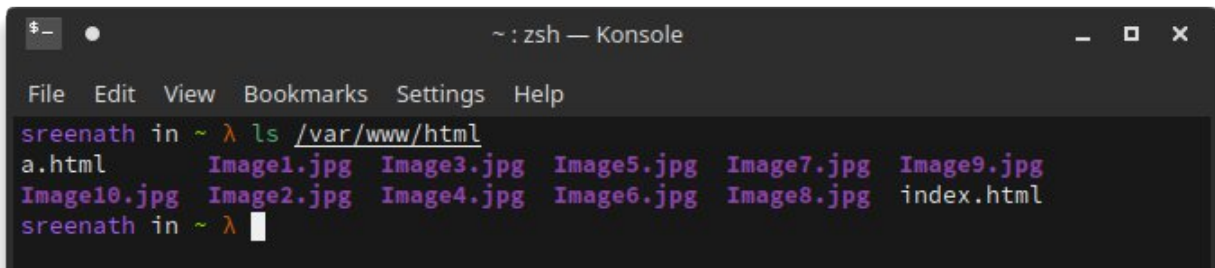

Now create a file called `a.html` which will serve as our webpage which includes all the images:

```
sudo vim /var/www/html/a.html
```

A terminal window titled ": sudo vim — Konsole" with a menu bar (File, Edit, View, Bookmarks, Settings, Help). It shows the content of a file being edited in vim. The content is an HTML document with a title "Spectacular Aircraft" and ten image tags. The status bar at the bottom indicates the file path, line count, and character count.

```
$ _ : sudo vim — Konsole
File Edit View Bookmarks Settings Help
<!DOCTYPE html>
<html>
  <body>
    <h2>Spectacular Aircraft</h2>
    <img src='Image1.jpg' />
    <img src='Image2.jpg' />
    <img src='Image3.jpg' />
    <img src='Image4.jpg' />
    <img src='Image5.jpg' />
    <img src='Image6.jpg' />
    <img src='Image7.jpg' />
    <img src='Image8.jpg' />
    <img src='Image9.jpg' />
    <img src='Image10.jpg' />
  </body>
</html>
~
~
~
~
~
~
~
~
~
~
"/var/www/html/a.html" 17L, 353C written
5,25-39 All
```

Now the `/var/www/html/` directory should look like this:

```
$ - ~ : zsh — Konsole
File Edit View Bookmarks Settings Help
sreenath in ~ λ ls /var/www/html
a.html      Image1.jpg  Image3.jpg  Image5.jpg  Image7.jpg  Image9.jpg
Image10.jpg Image2.jpg  Image4.jpg  Image6.jpg  Image8.jpg  index.html
sreenath in ~ λ
```

Step 4: Client Side Settings

On the client side, open the Firefox browser and type in `about:config` in the search box and search for the term `persistent`.

- While using a non-persistent connection, ensure that the `max-persistent-connections-per-server` has a value of 0 and the `persistent-settings` flag is set to `false`.
- While using persistent connections, `max-persistent-connections-per-server` should have a value that is greater than 0 and the `persistent-settings` flag is set to `true`.

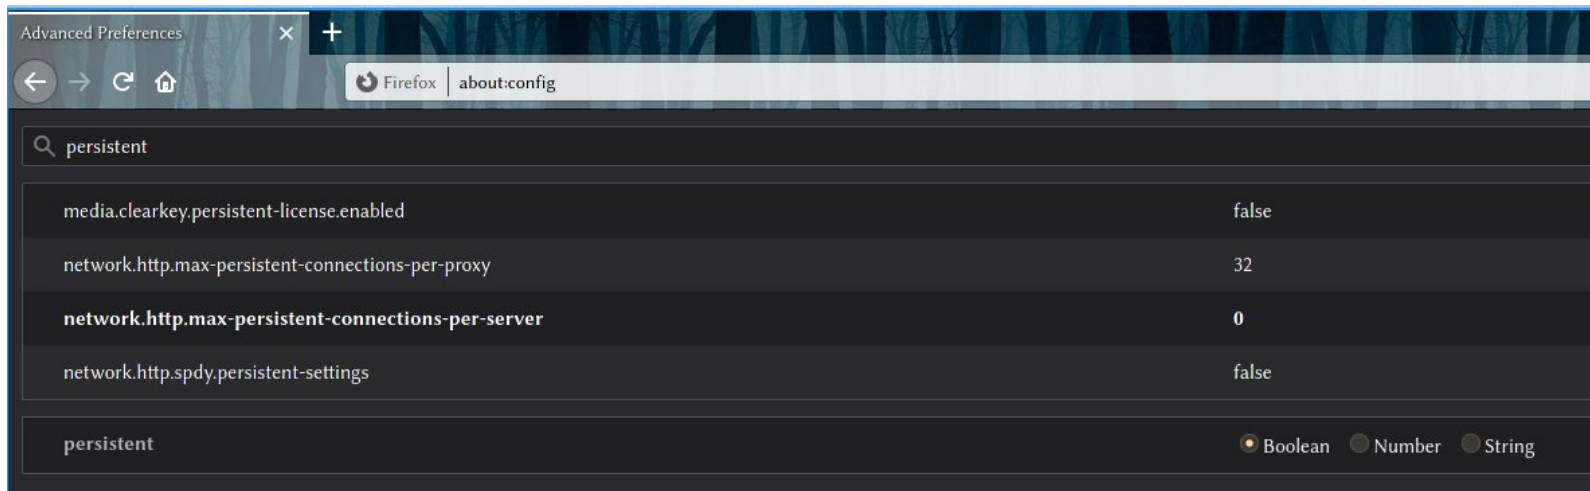

To access the webpage created on the server, simply type in:

`192.168.0.105/a.html`

in the browser to connect to the webpage.

PART 1: NON-PERSISTENT CONNECTION

Persistent Connections	Time at 1st GET	Time at final response	TIME
0	23.289742381	25.471370123	2.181626842
2	21.451555354	23.728619668	2.277064314
4	24.206413978	26.028032927	1.821618949
6	16.965441761	18.952362734	1.986920973
8	0.001445670	1.593562519	1.592116849
10	8.819146637	11.402410749	2.583264112

We notice that in general, the time taken reduces as we increase the number of persistent connections due to **HTTP pipelining** and we note that **8 connections** is optimal for my setup. We also notice that with an increase in connections to 10, more resources are kept occupied hence time increases as a result. We notice that the non-persistent connection is slow comparatively as it needs to setup the connection repeatedly.
